

Statement of Work Prepared for Dr John Doe, CEO, Company A

1. Objective

Deliver one cryopreserved one pellet of 10,000,000+ purified, microglial cells to act as “bait” for autoantibodies. These autoantibodies are produced in response to proteins that are expressed as a result of Traumatic Brain Injury (TBI).

2. Process for Generating Deliverables

- a. Service Team will isolate microglia from human brain tissue
 - i. Service Team will culture and deliver data to prove purity (microglial marker(s)).
 - ii. Data can be generated by immunostaining and/or FACS analysis.
- b. Service Team will culture sufficient quantity of cells for the delivery of a cryopreserved pellet of 10,000,000+ cells.
- c. Cell pellet will be packaged per established protocol and delivered to Company A as fixed cell pellet on a mutually agreeable delivery date.

3. Cost and Timeline

Total Cost: \$XXXXXX USD

Delivery Date: 3-4 weeks after receipt of Purchase Order
