<b>Amount</b>	1 mg
<b>Purity</b>	> 80 %, endotoxin free; peptides were purified by HPLC using a water and acetonitrile gradient.
<b>Reconstitution</b>	Peptide solubility depends on amino acid sequence and modifications. For dissolving peptides we recommend the following: <ul style="list-style-type: none"> <li>• Sonication will increase solubility.</li> <li>• 10% acetic acid in the solvent will facilitate dissolving basic peptides.</li> <li>• 10% ammonium bicarbonate will facilitate dissolving acidic peptides.</li> <li>• For peptides with extremely low solubility in aqueous solutions, organic solvents (such as DMSO, isopropanol, methanol, and acetonitrile) should be used first. Once the peptides are completely dissolved, water may be gradually added until the desired concentration is obtained.</li> </ul>
