Application	Fab-Streps were developed for Traceless Affinity Cell Selection (Fab-TACS®), based on our Strep-tag® technology. An increase in avidity is required for stable binding to the target. Depending on the Strep-Tactin® backbone, the following applications are possible: Fluorescent cell staining and sorting with fluorescently conjugated Strep- Tactin®, magnetic cell isolation with Strep-Tactin® Magnetic Microbeads or affinity chromatographic cell isolation with Strep-Tactin® TACS Agarose (columns). Biotin causes the dissociation of all reagents from the cells, yielding label-free populations for unbiased further use.
